Proceedings of the 15th International Conference on Organic Fruit-Growing
from February 20th to February 22th, 2012
at the University of Hohenheim, Germany

eco·fruit

Edited by
Foerdergemeinschaft Oekologischer Obstbau e.V.

Patronage: IFOAM EU Group
Patronage
IFOAM European Union Group

Organizing committee
Jutta Kienzle, Foeko e.V., (D)
Dr. Sabine Zikeli, Universität Hohenheim (D)
Prof. Dr. Claus P.W. Zebitz, Universität Hohenheim (D)
Dr. Markus Kelderer, Research Centre Leimburg (I)
Barbara Pfeiffer, LVWO Weinsberg (D)
Dr. Franz Ruess, LVWO Weinsberg (D)
Sascha Bucheleither, KOB Bavendorf (D)
Dr. Ulrich Mayr, KOB Bavendorf (D)
Bart Timmermans, Louis Bolk Institute (NL)
Marc Trapman, Bio Fruit Advies (NL)
Dr. Franco Weibel, FIBL (CH)
Francois Warlop, GRAB (F)
Dr. Peter Triloff, Marktgemeinschaft Bodenseeobst eG (D)
Dr. Hanne Lindhard, GartneriRådgivningen (DK)
Marianne Bertelsen, Aarhus University (DK)
Dr. Andreas Spomberger, BOKU Wien (AU)

Funded by the Ministry of Food and Rural Area (MLR)
Baden-Wuerttemberg

15th International Conference on Organic Fruit-Growing: Proceedings to the Conference from February, 20 to February, 22, 2012 at Hohenheim/Germany
Editor: Foerdergemeinschaft Oekologischer Obstbau e.V. (FOEKO). Weinsberg 2012
ISBN 978-3-98 04883-6

Content

Opening Adress..................................................11
M. Schlüter, Director IFOAM EU Group

Reviewing Process of Conference Contributions...............12

Reviewed Papers..................................................13

Pome fruit: Varieties and strategies for breeding
I.O. Baumgartner, L.R. Leumann, J.E. Frey, M. Joos, R.T. Voegele and M. Kollerhals
Breeding apples to withstand infection pressure by fire blight and other diseases ............14

Scab control: Strategies for direct scab control

J. Zimmer, B. Benduhn, Dr. U. Mayr, Dr. S. Kunz, H. Rank
Strategy to reduce the investment of copper for control of apple scab in organic apple growing .................................................................22

L. Mattedi, F. Forno, R. Maines and M. Varner
Apple Scab: Experiences from 2009 to 2011 in Trentino .....................................................29

W. van Hemelrijk, E. Croes and P. Creemers
Potassium bicarbonate: a conceivable alternative control measure towards scab on pome fruits ..............................................................................40

Disease control: Strategies for sooty blotch control

M. Miñarro, M.D. Blázquez and E. Dapena
Pest status of the sooty blotch and flyspeck complex in Asturian (NW Spain) apple orchards .................................................................47

S. Buchleitner, S. Späth, A. Bohr and U. Mayr
Disease development of sooty blotch and its correlation to wetness hours ......................54

Disease control: Strategies for the control of storage diseases

M. Kelderer, E. Lardschneider, N. Bellutti
Efficacy evaluation of plant protection products for Alternaria blotch (Alternaria spp) control in organic apple production ........................................61

Disease control: Strategies for the control of pear rust

M. Filippo, A. Spormberger and B. Schildberger
Monitoring of pear rust (Gymnosporangium sabinae) in Austria and implications for possible control strategies ..............................................65

Application technique in organic fruit growing

P. Tritoff, G. Bäcker, S. Kleisinger
Advantages from Canopy Related Spray Application in Organic Top Fruit Production ......74

M. Kelderer, A. Rainer, C. Casera and M. Thalheimer
Droplet size spectrum of overhead irrigation sprinklers used for targeted apple scab control ..............................................................................84

Strategies for codling moth control

S. Cavanna, M. Kelderer, A. Topp
Residue decline behaviour of the natural insecticide spinosad on apples .........................91

S. Caruso, C. Casera, M. Kelderer, S. Vergneoi
Limitation of Codling moth (Cydia pomonella) with different paraffin and plant oils ........98

Sustainability: Systems for the further development of organic fruit growing

J. Kienzle, P. Haug and N. Glöckler
POSEIDON - a tool to support the orientation towards a sustainable improvement of organic fruit growing in participative working groups ..............106

Strategies for crop load regulation

F. P. Weibelt, B. Lemcke, U. Monzello, I. Giordano B. Kloss
Successful blossom thinning and crop regulation for organic apple growing with potassium-bi-carbonato (Armicarb®): Results of field experiments over 3 years with 11 cultivars .................................................................114

S. Sinatsch, B. Pfeiffer, T. Schulte, J. Zimmer, L. Brockamp, B. Benduhn
Comparison of different crop regulation methods for organically grown apples (cultivar 'Pinya' and 'Estar') ..............................................................................124
Strategies for the control of fire blight

A. Hummrich and R.T. Voegele
Photo-Optical, Non-Invasive Detection of the Fire Blight Pathogen *E. amylovora* .......... 140

S. Kunz, A. Schmitt, P. Haug
Summary of an eight year research project on fire blight control ......... 146

M. Joos, A. Reifus, A. Rex, S. Buck, R.T. Voegele
Cultivar Testing, Pathogenesis and Quantitative Distinction of Live and Dead Cells of *E. amylovora* ........... 153

Stone fruit: Varieties of currants

H. Lindhard Pedersen and L. Andersen
Black and red currant cultivars for organic production ................. 215

Stone fruit: Strategies for the control of cherry fruit fly

MG. Tommasini and S. Caruso
Field trials on adulticide bait (spintr-fly®) to control the cherry fruit fly in Emilia-Romagna (North Italy) in 2010 and 2011 ................. 160

E. Böckmann, E. Hummel, H. Vogt
Promising field and semi field results for cherry fruit fly control using neem .......... 167

F. Warlop, E. Filleron
Controlling cherry fruit fly under organic farming in France: Hopes and despair ...... 173

Stone fruit: Strategies for the control of *Drosophila suzukii*

A. Grassi, M. Pallaoro
*Drosophila suzukii* (Matsumura), a revolution for soft fruits in Trentino ............ 179

Stone fruit: Strategies for the control of fruit damaging Tortricid species

D. Zingg, I. Kraaz, H. Wandeler; M. Züger
Madex Twin, a new *Cydia Pomonella* Granulovirus Isolate for the Control of both Coding Moth *Cydia Pomonella* and Oriental Fruit Moth *Grapholita Molesta* .......... 187

T. Schult, J. Zimmer, B. Pfeiffer, G. Schmücker-Tränkle
Regulation of plum moth (Cydia funebrana) with *Cydia pomonella* granulovirus (CpGV) in organic plum orchards - first results ............... 194

Stone fruit: Varieties of strawberries

M. Bestflesch, M. Höfer, K. Richter, M.-V. Hanke, E. Schulte, A. Peil
Breeding of resistant strawberry cultivars for organic fruit production – Diallel crossing strategies and resistance tests for *Botrytis cinerea* and *Xanthomonas fragariae* .......... 221

Small fruit: Strategies for the control of pests and diseases in strawberries

A. Weiβ, S. Weissfuss, M. Hinze, P. Leistra, S. Kunz
Dispersal of *Aureobasidium pullulans* by pollinating insects to control *Botrytis* infection in strawberries .......... 228
Short contributions

Pome fruit: Varieties and strategies for breeding

D. E. Kruczyńska, K. P. Rutkowski, A. Wawrzyńczak, H. Bryk
Evaluation of Polish scab-resistant apple cultivars in organic orchard

Scab control: Strategies to reduce the inoculum

F. Rüdiger, N. Nietsch, A. Kollar, B. Pfeiffer
Efficacy of alternative substances to control apple scab by leaf litter treatment

M. Korsgaard
Strategic irrigation against apple scab (Venturia inaequalis)

B. Benduhn, S. Brauer, C. Adolphi
Effect on abundance of important pome fruit pests and diseases by mixing four apple varieties in one orchard

B.G.H. Timmermans and P.J. Janssens
Differences in leaf litter, ascospore production and infection of pear scab (Venturia pirina) in Dutch organic orchards

A. Bohr, S. Buchleither, S. Spáth, U. Mayr
Application of Beetroot Vinasse – Influence on Foliage Decomposition and Ascospore Potential on Remaining Leaf Material

Scab control: Strategies for direct scab control

R. Milling, J.-P. Laffranque and M. Orpella
Arimicarb® - a new bio-fungicide for use in organic and conventional fruit growing in Europe

M. Bagar, V. Psota
Evaluation of products suitable for scab (Venturia inaequalis) (Cke.) Wint. control in organic fruit production and implementation of sea algae based product Alginure to the IP scab control in Czech Republic

Disease control: Strategies for the control of storage diseases

J. Kowalska, D. Remlein-Starosta and J. Bocianowski
Penicillium decay on stored apple fruits after microbiological treatments

Sustainability: Improvement of plant growth by compost and microorganisms

L. Sas Pasztz, B. Sumorok, E. Malusă, E. Derkowska and S. Głuszek
The influence of bioproducts on root growth and mycorrhizal occurrence in the rhizosphere of strawberry plants cv. 'Elanta' under controlled conditions

L. Sas Pasztz, E. Derkowska, B. Sumorok, E. Malusă, W. Szepien and S. Głuszek
Effect of composts based on brown coal on the growth of roots of strawberry plants cv. 'Elanta' and their colonization by arbuscular mycorrhizal fungi

L. Sas Pasztz, E. Derkowska, B. Sumorok, E. Malusă, S. Głuszek
Effect of bioproducts on root growth and the occurrence of arbuscular mycorrhizal fungi in the rhizosphere of strawberry plants cv. 'Elanta' and 'Elkat' in field conditions

L. Sas Pasztz, B. Sumorok, E. Derkowska, P. Trzciński, A. Bogumił, A. Harbuzov, S. Głuszek and E. Malusă
The collection of beneficial soil microorganisms held in the SYMBIO BANK

W. Szepien, E. Malusă, L. Sas Pasztz, G. Renzi, J. Ciesiel ska
Effect of brown coal-based composts produced with the use of white rot fungi on the growth and yield of strawberry plants

S. Boček, H. Sasková, J. Mokrnšková, L. Dokaupil, P. Salaš
Impact of supplementary plant preparations and organic fertilizers on yield of organic strawberries cv. 'Elkat' and 'Symphony'

Sustainability: Organic fruit growing and nature conservation

P. Epp
Bird protection in the State Research Station for fruit growing Heuchlingen

Strategies for codling moth control

J. Kienzie, O. Zimmermann, B. Währer, P. Triloff; J. Morhard; E. Landgesell; C.P.W. Zeibitz
New species and new methods of application – a new chance for Trichogramma in Codling Moth Control

G. Libourel, P. Franck
Natural regulation of codling moth populations in southern France

V. Faita, K. Holy, P. Nadenikova, J. Stará
Side effect of preparations used in organic farming on Forficula auricularia and Chrysoperla carnea

E. Frisch; K. Undorf-Spahn; J. Kienzie; J. Huber and J. A. Jehle
Effect of mixtures with other products on the efficacy of codling moth granulovirus (CpGV)
A. Herz, G. Eder, S. Feiertag and S. Wittlich
Use of nectar resources by Asocogaster quadridentata WESMAEL (Hymenoptera, Braconidae), an important egg-larval parasitoid of the codling moth: first evidence from laboratory studies .......................................................... 338

Sustainability: Systems for the further development of organic fruit growing

E. Bravin, M. Blunschi
Self evaluation for fruit growers: a cooperation project among growers, extension and research .......................................................... 342

Stone fruit: Strategies for the control of fruit damaging Tortricid species

D. Stephan
Artificial hideouts for control of fruit moths: Persistence of the entomopathogenic fungi Metarhizium anisopliae and Isaria fumosorosea under semi-field condition .......................................................... 347

Stone fruit: Variety testing and disease control

Apricot susceptibility to blossom brown rot (Monilinia spp.) and leaf rust (Tranzschelia spp.) under low-input production system .......................................................... 352

A. Skřivanová, R. Vávra, H. Drahošová, B. Krška, I. Ondrášek
Compatibility of apricot cultivars with rootstocks Krymsk-1 and Krymsk-2 .......................................................... 356

V. Psota, M. Bagar, P. Ackermann and M. Schovánek
Control of brown rot blossom blight (Monilinia laxa) on apricots – preliminary results .......................................................... 360

R. Vávra, H. Drahošová, A. Skřivanová, L. Odstrčilová, B. Krška, I. Ondrášek
Responses of apricot genotypes to brown fruit rot (Monilinia spp.) to artificial and natural infections .......................................................... 364

B. Pfeiffer, H. Rank, G. Schmückle-Tränkle
New results from testing of different Sour cherry cultivars .......................................................... 369

E. Rozpara, A. Głowacka
The usefulness of stone fruit species and cultivars for organic fruit production in Poland .......................................................... 375

Stone fruit: Improving production

A. Sporberger, M. Filipp, C. Freiding, K. Waltl
Improving Organic Production of Plums (Prunus domestica) in Austria .......................................................... 382

Small fruit: Varieties of strawberries

L. Wutzky, K. Olbricht, P. Scheewe, A. Ludwig, D. Ulrich
Studies on Biodiversity of Fragaria vesca L .......................................................... 386

The assessment of allergenicity risk of selected strawberry cultivars .......................................................... 391

Small fruit: Strategies for the control of pests and diseases in strawberries

C. Steen, K. Dillmann, R. Ortlieb
Anthonomus rubi (Strawberry blossom weevil): Covering as a control possibility in the late strawberry cultivar Malwin in the first year .......................................................... 395

I.L. Bisatti, J. Paiz and D. Stephan
Influence of antagonistic micro-organisms on the growth of strawberry plants in the presence of Verticillium dahliae and Phytophthora cactorum .......................................................... 399

Elderberry production

Dr. H.-J. Krauthausen, I. Toups, G. Hörner, B. Benduhn, J. Zimmer, T. Schult
Etiology of the corymb wilting of Elderberry and Its control in organic production .......................................................... 404

Organic nursery production

Z.S. Grzyb, P. Bielicki, W. Piotrowski, L. Sas Paszt and E. Malusá
Effect of some organic fertilizers and amendments on the quality of maiden trees of two apple cultivars .......................................................... 410

Promotion of beneficial organisms

T. Belien, R. Moerkens, H. Leirs, G. Peusens
Earwig Management Tool: a practical software application to predict and optimize the development of earwig populations in pip fruit orchards .......................................................... 415
Opening Address

Dear Participants,
It gives me a great pleasure to welcome you all to the 15th International Conference on Organic Fruit Growing "Ecofruit. The IFOAM EU Group is delighted to be the patron of this biennial event for the fourth consecutive period. Ecofruit is an important date in the calendar for the organic researchers, consultants and growers to address problems and exchange solutions for organic fruit production now and into the future.

Your contribution to food and farming systems not only helps to develop more robust and resilient organic fruit farming in Europe, but ensures that the organic fruit sector continues to secure and expand its market share and in the process play a strategic part in realising more sustainable food production worldwide. While there has been a notable decline in organic fruit cultivation in some EU countries, Europe continues to record growth across key fruit groups, including grapes and temperate and citrus fruit. This is a testament to the results you and colleagues has delivered over the decades and the valuable contribution you make to the organic research as a whole.

The organic research community continues to demonstrate its ability and potential to respond proactively to the impending environmental and socio-economic challenges we face in terms of climate change, biodiversity loss and water scarcity. Over the last 20 years public policymakers have slowly begun to acknowledge the added value that the sector delivers in the area of research and innovation, with several research projects funded by the European Commission since the mid-1990s. Current figures show that research funding for organic farming has increased seven-fold from 5m between 1990 and 1994 under FP3 to 41m between 1990 and 2002 under FP6. Despite the sector’s proven track record funding under FP6 only represented 0.23% of the overall budget.

The new EU framework programme for EU Research and Innovation Horizon 2020 provides a decisive opportunity for the organic research community to sustain and build upon its achievements to date. With its proven track record the time has come for our sector to be recognised in its entirety by the EU as a key actor within the Union’s research programmes. This recognition must be backed up with the necessary financial support in order to realise the full potential of the sector.

Through the TP Organics technology platform the IFOAM EU Group in partnership with other members and supporters is strongly committed to strengthening the position of organic research and development now and into the future. Further, IFOAM EU will strengthen its efforts to improve knowledge transfer from research to practice, a challenge you are very much aware of.

Over the past four years we have worked consistently to promote the strategic importance of organic research in making Europe a world leader in ecologically sustainable food production. We have confronted many barriers in working to secure public financial support and I am sure we will face new challenges ahead, but I am confident with your cooperation and support we can ensure that organic research has a bright and promising future.

Marco Schlütter
Director IFOAM EU Group
